

SMART COAT

Lasts up to **90** days

SMART COAT IS A SURFACE COATING THAT ENHANCES THE SURFACE TENSION, MAKING IT EASIER TO REMOVE DIRT AND DUST.

APPLICATIONS

MARINE

CYCLING

MINING

MOTOR SPORT

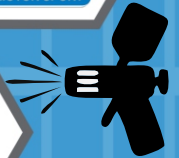

MOTOR CROSS

WAREHOUSING

CONSTRUCTION

Coverage **12 m² / l**

APPLICATION METHODS

Easy to use. Can be applied by spraying or wiping.
If product is not new, wash clean and dry thoroughly prior to application.

Wipe-On:

Apply using a clean, woven, lint free cotton cloth or a high quality paper towel e.g. SCOTT Shop Towels on a Roll. Saturate the cloth or paper towels with product until completely wet, but not dripping, and wipe onto the clean surface. Apply using smooth even strokes until the film is uniformly dry without visible wiping marks. Wait 20 minutes before applying a second coat and allow to cure for 2 hrs.

Spray-On:

SMART COAT may also be sprayed on using HVLP, and other types of pressured systems. If hand pumped spray applicators are used rather than pressurized spray equipment, it may be necessary to wipe the part to create a uniform film and to avoid puddling. 2-3 coats are recommended depending on the surface geometry. For more difficult shapes or conditions, use more coats, or increase the frequency of re-application. Allow 2 hrs to fully cure.

CAUTIONS

DANGER

No Flammable
No explosion hazards known
No hazardous ingredients

PERSONAL PROTECTIVE EQUIPMENT

Skin protection and respiratory protection not required
Eye protection requires safety glasses

REPAINTING

Note that in the event of any paint repairs required, that SMART COAT must be removed with the correct cleaner to ensure adhesion of the paint

BENEFITS

- * Water-based and therefore no VOC's (Volatile Organic Compounds)
- * Easy application by cloth or spray method
- * Very low cost per square surface coverage
- * Makes cleaning of coal, dust and other particles much easier and cheaper to clean
- * Creates a hydrophobic surface tension
- * Easy to apply touch ups
- * Much faster cleaning process
- * Packed in easy packaging
 - * 150ml (Aerosol bottle)
 - * 1 Quart (900g packaging)
 - * 1 US Gallon (3.6kg packaging)
 - * 25kg high volume processing for larger fleet requirements
